

1. Which of the following are valid variable names in java?

| | |
|---------------|---------------|
| myAge ✓ | x ✓ |
| my variable ✗ | \$Tax ✓ |
| 3rdFile ✗ | double ✗ |
| public ✗ | x*y ✗ |
| averageAge ✓ | value@start ✗ |

2. Write a program that will calculate and display the area of a room with the following measurements:

4.25

1.5

3. Write a program which will calculate the volume of a box which has a length of 4 inches, a width of 2 inches, and a depth of 12 inches.
*Volume = Length * Width * Depth)*
4. Write a program to calculate and display the average of three exam results, 100, 98, and 65. (Average = all numbers added together, then divided by the amount of numbers)
5. Write a program that will calculate the price of 4 cinema tickets at 7.50 each.
6. John weighs 174 pounds. Write a program that will calculate and display his weight in stone and pounds (1 stone = 14 pounds).

Hint - Use the modulus operator % to find the remainder

Extra Practice Question

Write a program that declares two variables – number1 and number2. The program will then calculate and print out:

- The result when adding the two numbers
- The result when taking number2 away from number1
- The product of the two numbers (multiplied)
- The result when dividing number1 by number2
- The remainder when dividing number1 by number2.

Run your program once, then change the values in the variables, re-compile and run again. Use a calculator to check that it is giving you the right answers.
